Hans Rudolf Foundation Fellowship	2015 – 2016
Hanns Seidel Foundation Fellowship	2013 – 2017
Claussen Simon Foundation Fellowship	2012 – 2013

TEACHING

Graduate

Topics in US and International Economic History (Stanford ECON 226) Since 2025

This graduate course emphasizes theoretical and empirical methods for studying long-run economic change, centering around key challenges facing society today: technological change, barriers to opportunity, environmental change, and political polarization. Drawing on historical evidence and economic analysis, we investigate how societies have addressed these challenges and what lessons the past provides for the future. While the evidence spans various periods of history, the course does not cover periods chronologically but rather focuses on analysis of specific questions and mechanisms of change.

Undergraduate

The History and Future of Inequality (Stanford ECON 30) Starting 2026

This undergraduate course traces the history and future of economic inequality, from forager societies to Artificial Intelligence. We examine long-run patterns across the world; modern trends in within- and between-country inequality; and the roles of identity, technology, climate change, institutions, and policy. The class blends economic history with applied micro and data analysis. Students will read research, replicate key results, and analyze historical and contemporary datasets. We focus on mechanisms: how technology, markets, politics, climate, and system-wide shocks widen or narrow gaps; why some places converge while others diverge; and what has worked to expand opportunity.

Guest lectures

2025: Stanford (Political Science), UC Irvine, Spelman College

2024: NYU Stern, Stanford

2023: Princeton
