Claussen Simon Foundation Fellowship	2012 – 2013

TEACHING

Graduate

Topics in US and International Economic History (Stanford ECON 226) Since 2025

This graduate course emphasizes theoretical and empirical methods for studying long-run economic change, centering around key challenges facing society today: technological change, barriers to opportunity, environmental change, and political polarization. Drawing on historical evidence and economic analysis, we investigate how societies have addressed these challenges and what lessons the past provides for the future. While the evidence spans various periods of history, the course does not cover periods chronologically but rather focuses on analysis of specific questions and mechanisms of change.
